

OvinAlp

Haute fertilisation

OvinAlp is a French family company founded in 1988 by Éric Giovale in Ribiers in the Hautes-Alpes (one of the least polluted departments in France). OvinAlp designs and produces fertiliser solutions for professionals: organic soil improvers, organic and organo-mineral fertilisers, biokinetic fertility activators, liquid organic fertilisers, foliar nutrients and soluble fertilisers. Located where its supplies are sourced, OvinAlp perpetuates a tradition that dates back several millennia (the use of mignon, sheep manure from the Alps from extensive cattle raising) to enrich soil effectively and promote natural, balanced and efficient crop-growing methods.

Today, OvinAlp, a company born from tradition, with an ultra-modern production unit and a fruitful Research & Innovation centre, recommends and develops fertiliser solutions for very demanding professionals who are accredited for organic agriculture and biodynamics. It's no coincidence that major wine, vegetable and cereal growers, gardeners, landscape architects and breeders use and prescribe OvinAlp!

Group key figures

A production company

- 45,000 tonnes/year of organic and organo-mineral fertiliser
- 400,000 litres/year of liquid organic and foliar fertilisers

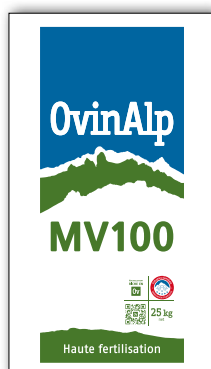

An efficient company

Fertilisation, transport, green energy, tree farming, etc.

- 75 employees
- €26M in group turnover
- 3% of turnover dedicated to Research and Innovation

Research partners

Equipped with an operational laboratory, OvinAlp researchers partner many research bodies such as the INRA, COMIFER, CIVC in Champagne, ARVALIS, CIRAD, French National Natural History Museum (Ecology and Biodiversity Management department)... and many Chambers of Agriculture.

MV100 our flagship product

- MV100 is 100% Plant Matter: selected sheep manure, fruit pulp and Ov active principle
- 12 months of biofermentation following an exclusive process
- Selection and gathering of sheep manure from French departments 04 and 05 (80km radius around the plant)

Ov

Ov is the active principle of OvinAlp, obtained from the solid biofermentation of organic plant matter from high-quality sheep manure through the action of particularly rich and naturally present microbial flora.

Standardisation and certification

As the first company with ISO 14001 certification for its composting process and platform, OvinAlp's sustainable development strategy aims to improve the fertility of cultivated soils and plant nutrition, with respect for the environment, users and consumers. OvinAlp is also the first French company to have obtained composting hygiene accreditation for the production of organic soil improvers and fertilisers.

Accreditation no.: FR 05 118 106
